

VENUS GLOBAL CHAIN

"This document outlines the idea, aims and strategies to the readers. We have a strong team at the back of this project, that is rudimentary for our success. We are hoping to grab prospective audience with to develop more with a better inflammation rate."

Abstract

Blockchain startups have embraced initial coin offerings (ICOs) as a vehicle to raise early capital. The crypto tokens offered in these sales are intended to fill a widely varied set of roles on different platforms. Some tokens are like currencies, others are more like securities, and others have properties that are entirely new. Each company's technological vision calls for a token with unique properties and uses. The main point of this paper is that designing a successful token must consider certain aspects of monetary theory, financial economics, and game theory. Right here, there is beginning of a whole new concept, an Indian cryptocurrency decentralized automatic earning system; Venus Global Chain (VCGN). As a result of deep research on the existing tokens in a cryptocurrency marketplace, we have a clear mindset regarding plans and strategies. These strategies will surely lead us to achieve our goals in a near future.

Introduction

A cryptocurrency is a blockchain's 'native currency' e.g., Bitcoin or Ether. It is issued directly by the blockchain protocol on which it processes. Many times, cryptocurrencies are used to pay transaction fees or incentivize users to keep the cryptocurrency's network secure. Investors put their money into cryptocurrency as token which are typically served as a medium of exchange to buy goods and services. These are also served as store of value to be exchanged for fiat currency like Indian Rupee or US Dollar. Investors hope to get good returns or at least the same value as invested at the end. According to the most recent report, bitcoin price in India stood at Rs. 28.2 lakhs and Ethereum price in India stood at Rs. 1.84 lakh.

Crypto tokens often share deep compatibility with cryptocurrencies, but they are a different digital asset class. Like cryptocurrency, tokens can hold value and can be exchanged. But a token can also represent physical assets, or a utility or service. A very simple description of a token would be that it's a 'smart contract'. Essentially

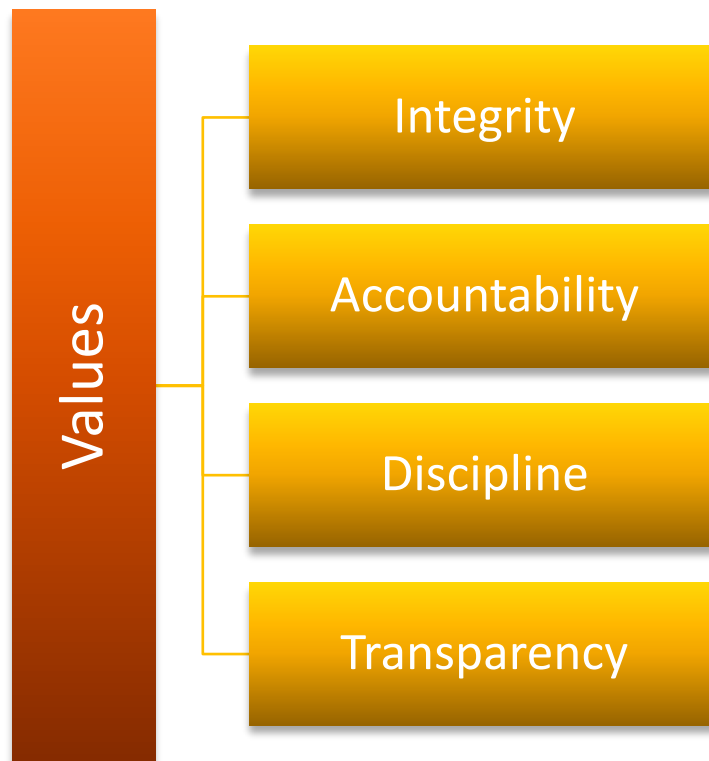

rights management tools, these contracts can represent any existing digital or physical asset.

Venus Global Chain (VCGN) brings a complete business plan with the bundle of opportunities. We are growing more and more, and our results are unbeatable in the financial market. There are 100% profits for each investor every day. We have a team that works with consistency and a lot of experience in market analysis. We are looking for people interested in investing with us.

Moreover, we use all technology to our advantage, we relate to the users and the financial market daily, bringing real profits to the consumers, who already operate in the field of trading and cryptocurrencies. Not only this, but these facilities are also available for the beginners. Finally, we also offer an affiliate program in which you have several cash bonuses that can speed up your profitability progress much more.

Determination of the most appropriate pricing model for the business is tricky and takes considerable research, planning, and testing before full implementation across all the products and services.

Values

Integrity:

Companies with integrity as their value always behave ethically and do the right things, even behind closed doors.

Accountability:

We are account to bring all the necessary information to our customers. They must be aware of all the minor details before investing.

Discipline

In modern business, discipline and work ethics are the things that should be considered. Because of our passion to make things simple, we err and try to make them easy.

Trust and Transparency

Trust has a distinct importance when it comes to trading. We provide our services with complete coordination, trust, and transparency.

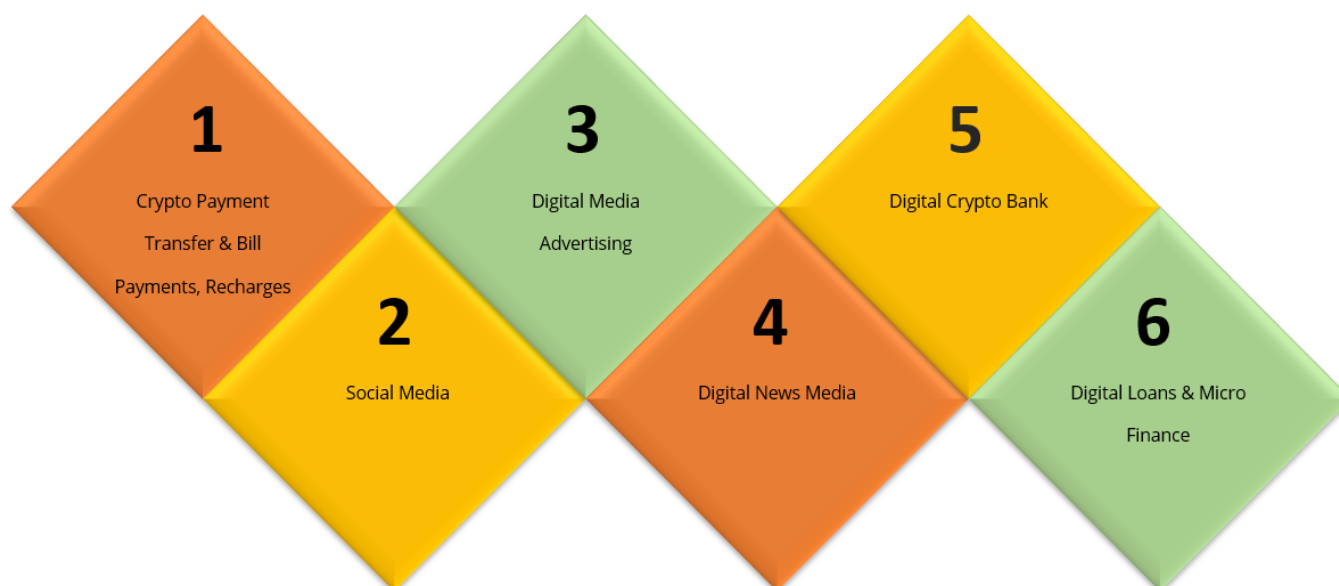

Vision

We believe that we can both strengthen the crypto ecosystem through deeper collaboration among different blockchain projects and protect and empower community members by facilitating movement between blockchains via intuitive conversion of tokens. We aim to uplift our token to be in the list of global top-notch tokens. Furthermore, we also draw our attention to take actions that will result in a better revenue and our token holders will get huge profit.

Projects

Digital Marketing

Just like other markets, cryptocurrencies have been emergency with each passing day. These are becoming more popular in among people. The exposure of cryptocurrency market has been expanded vigorously especially during this pandemic. Since the environment is different as compared to the traditional markets, we are working to expand our token in marketplace through digital market. Below are the projects that we have planned to attempt in next days.

The page features a light green background with several decorative squares in the corners. In the top right, there is a light green square, a medium green square, an orange square, a yellow square, and a white square. In the bottom left, there is a white square, a light green square, a yellow square, an orange square, a light green square, and a medium green square.
